

**Tibetan Romanization Table**  
2011 version

**Tibetan**

Internal capitalization of base consonants is not to be followed. When Tibetan is written in another script (e.g., 'Phags-pa) the corresponding letters in that script are romanized according to this table.

**Vowels and Diphthongs** (see Notes 1 and 2)

**Notes**

**Tibetan Romanization Table**  
**2011 version**

1. Only the vowel forms that appear at the beginning of a syllable are listed. A syllable is defined as a graph or group of graphs followed by a *tsheg* ( ་ ). The forms used for vowels following a consonant can be found in grammars.
2. Letters enclosed within brackets in the table are used in Sanskrit words.
3. The vowel *a* is implicit after all consonants in independent form and is supplied in romanization, unless another vowel is indicated by its appropriate sign. *Tsheg* ( ་ ), the syllabic boundary marker, is represented by a hyphen in proper names and by a space in other words.
4. The *'a chun* is represented by an apostrophe ( ' ) in pre-initial and final position unless marked with a vowel marker, in which case it is represented by the apostrophe plus the appropriate vowel. When *'a chun* is written below any letter representing vocalic length, it is romanized according to the vowel table.
5. When གྱ is preceded by ག, it is romanized *g'y* to distinguish it from གྱ, which is romanized *gya*.
