

PREMIS workshop

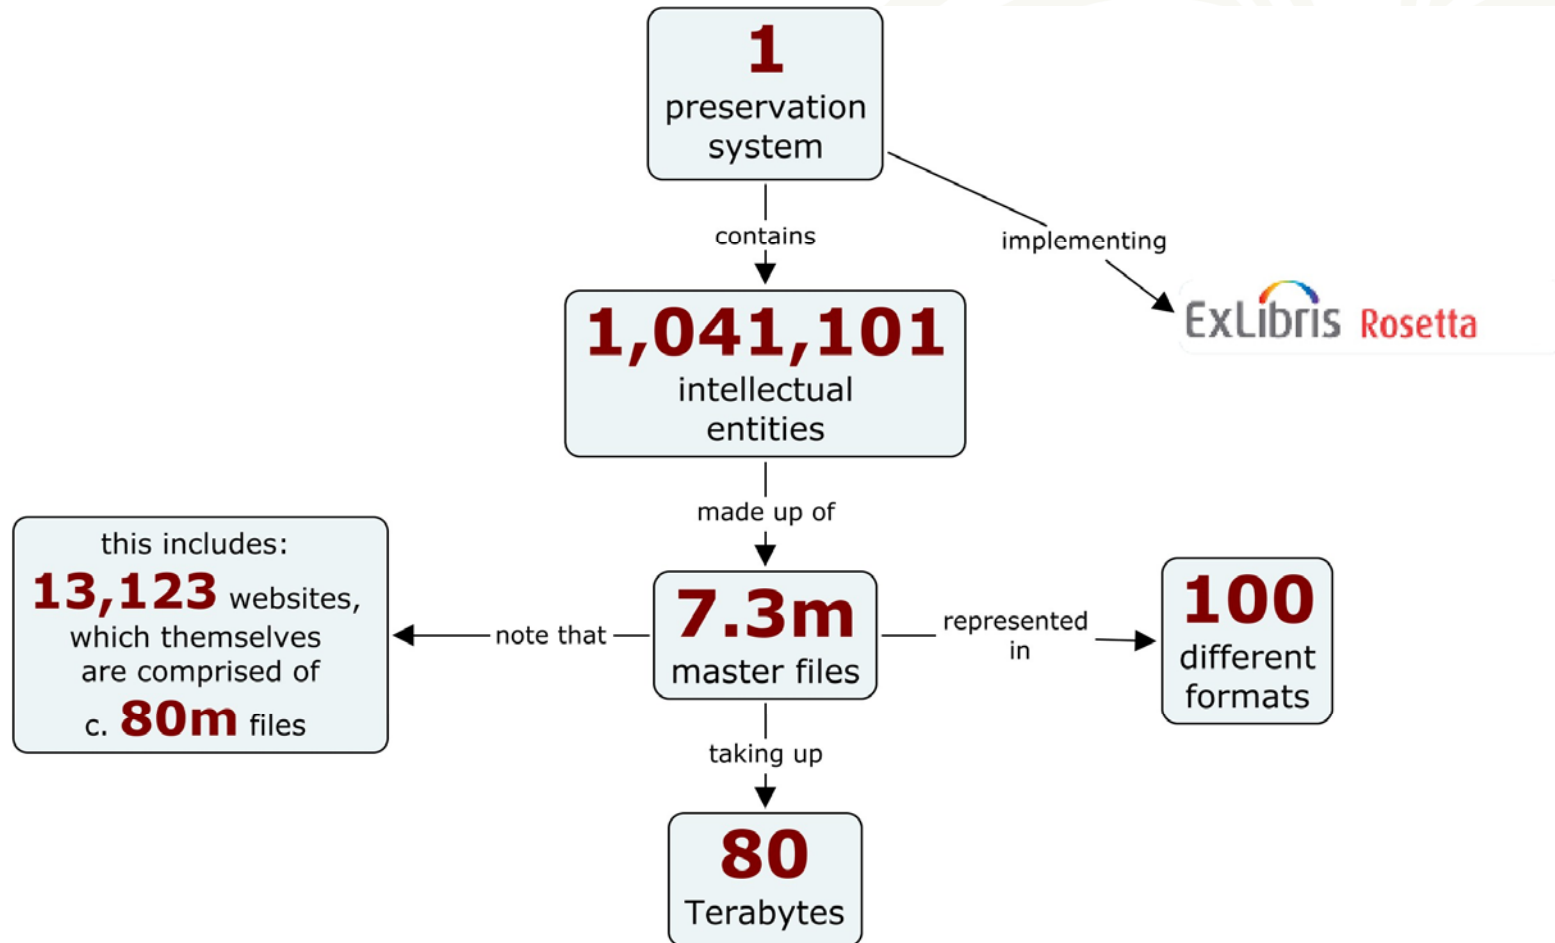

PREMIS at NLNZ

Lynn Benson

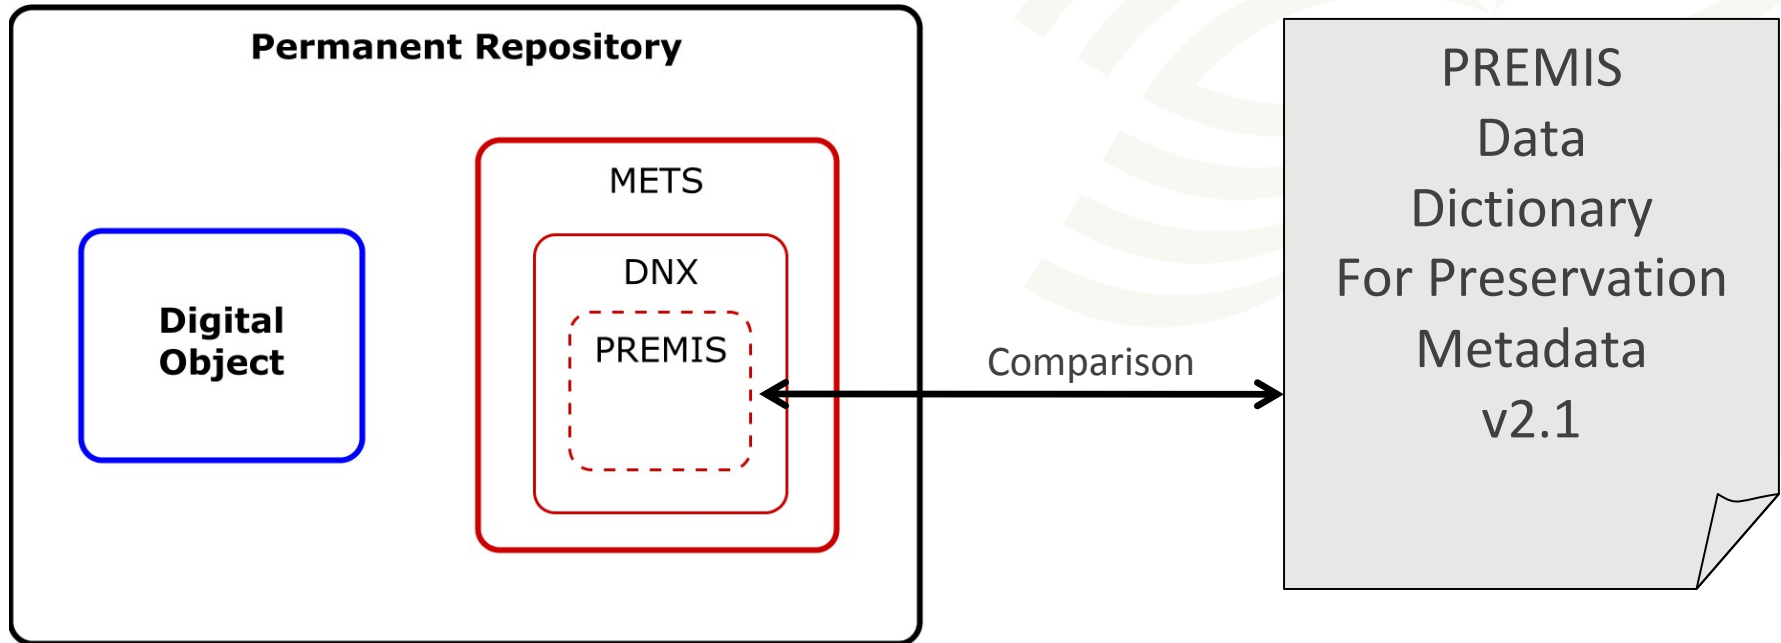

National Library of New Zealand Te Puna Mātauranga o Aotearoa

What NLNZ has

Utilising PREMIS

Provenance notes – PREMIS requests

Recommends an addition of a detailed provenance note.

There should be a new Note entity that contains the details of the provenance note in a suitably structured way. This would allow the eventOutcomeDetail to be used to contain event related data, and move the actual provenance record into a more suitable data location.

Conformance

Translation is a negotiation
English to Italian to English

$A = B$ (*premis to NLNZ*)

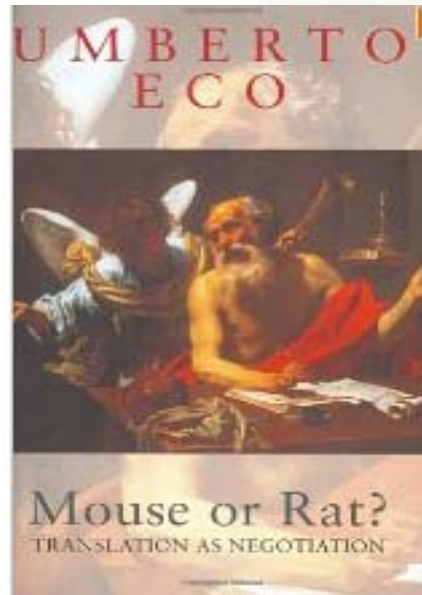

$A = C$ (*premis to other*)

$B = C$??? (*ideal state*)

“The Data Dictionary **does not prescribe** in any way how a repository should implement PREMIS Semantic units in its system.

“This bestows a great deal of **flexibility** on repository managers”

Conformance statement

Conclusions

1. If still valid, we need more examples of definitions of bitstream/filestream. Tools needed to aid definition
2. A request for a new provenance section will be submitted. We would love detailed conversation on it.
3. We would like conformance to be stronger.
